$$d)\,\varsigma_{ea}\quad \lceil \ :=\ \big\langle \, \big|_{0}^{0} \longrightarrow \big|_{1}^{0} \, \big|_{0}^{0} \wedge \big|_{2}^{0} \longrightarrow \big|_{1}^{0} \wedge \big|_{3}^{0} \, \big|_{0}^{0} \wedge \big|_{2}^{0} \wedge \big|_{4}^{0} \longrightarrow \big|_{1}^{0} \wedge \big|_{3}^{0} \wedge \big|_{5}^{0} \dots \big|_{1}^{0} \big|_{3}^{0} \big|_{5}^{0} \dots \big|_{1}^{0} \big|_$$

Notar que en los antecedentes solo ocurren conquaiones de números pares y en los consecuentes solo ocurren congunciones de números impares, luego existen varias asignaciones de T, por no deair tantas como números naturales.

Sea of a signación tal que $\delta(P_c) = 1$ $\forall c \in \mathbb{N}_0$, Por teorema $\exists [1:] \delta$ que extiende a δ sobre P_{rop} , veamos que δ valida Γ c.e. $[P] \delta = 1$ $\forall P \in \Gamma$

$$\begin{bmatrix} \begin{matrix} \mathsf{K} & \mathsf{K} \\ \land \mathsf{P}_{2i} & \longrightarrow & \land \mathsf{P}_{2i+1} \end{matrix} \end{bmatrix}_{i=0}^{\mathsf{K}}$$

$$\equiv \oint \mathsf{Def} \quad \text{sémantica} \quad \text{can respecto} \quad \mathsf{a} \quad (\longrightarrow) \}$$

$$= \oint \mathsf{Def} \quad \text{sémantica} \quad \mathsf{can} \quad \text{respecto} \quad \mathsf{a} \quad (\land) \}$$

$$\equiv \oint \mathsf{Def} \quad \text{sémantica} \quad \mathsf{can} \quad \text{respecto} \quad \mathsf{a} \quad (\land) \}$$

$$\max_{k} \left\{ \left[- \min_{i=0}^{K} \left[\left[p_{2i} \right] \right] \right\}, \min_{i=0}^{K} \left[\left[p_{2i+1} \right] \right] \right\} \left\{ \\ \equiv \left\{ \text{Construction de } \delta \right\}$$

$$\max_{k} \left\{ \left[- \min_{i=0}^{K} 1_{i}, \min_{i=0}^{K} 1_{i} \right] \right\}$$

$$\equiv \left\{ \left[\operatorname{Def} de \min_{i} \right] \right\}$$

$$\equiv \left\{ \left[\operatorname{Def} de \max_{i} \right] \right\}$$

$$= \left\{ \left[\operatorname{Def} de \max_{i} \right] \right\}$$
